Vocabulary	Definition	Picture
body parts	The names for different parts of our bodies that help us do things.	
disability	When senses or body parts prevent us from doing day-to-day activities.	
hearing	A sense that allows us to hear. Ears allow humans to hear.	
senses	How we learn about the world from when we are a baby to an adult.	

Vocabulary	Definition	Picture
sight	A sense that allows us to see. Eyes allow humans to see.	
smell	A sense that allows us to identify something. Noses allow humans to see.	
taste	A sense that allows us to know if things are sweet, salty or sour. Mouths allow humans to taste.	
touch	A sense that allows us to feel. Hands allow humans to touch.	

Science Knowledge Organiser – Year 1

All About Me

Key Knowledge Facts

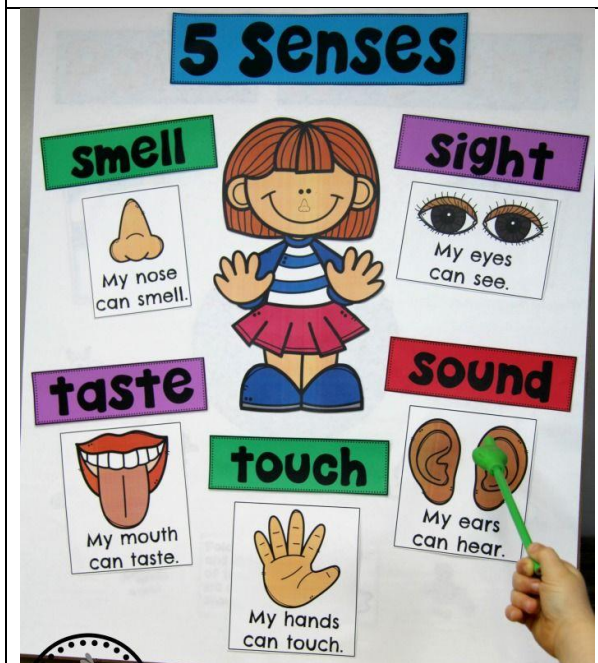

Senses are how we learn about the world from when we are a baby to an adult.

Most humans have 5 senses:
sight, hearing, smell, touch and taste.

Most humans have different body parts that allow them to use the senses, like eyes, ears, hands and feet, a mouth and nose.

Some people are born without or lose their senses in their lifetime. This also can happen with body parts too.

The Five Senses and the body parts that help us to do them

Hearing aids and glasses help when our sight and hearing don't work as well. They look like this:

Human body parts
