

Can you make an egg bounce?

Try this egg-speriment!

What you need:

- One boiled egg
- White vinegar
- Large bowl

How to:

1. Place the boiled egg in the bowl.
2. Completely cover the boiled egg with vinegar.
3. After three days, remove the egg from the jar
4. Gently rinse the shell off the egg with tap water.

How does the egg feel? Rubbery? Try bouncing the egg on a hard surface. Get your family to have a go. Who can get the egg to bounce highest?

You can make a coloured bouncy egg by adding food colouring to the vinegar.

Or, you can soak raw eggs in vinegar, with a similar result.

Don't bounce raw eggs though - they might pop!
