

MARSHMALLOW CATAPULT

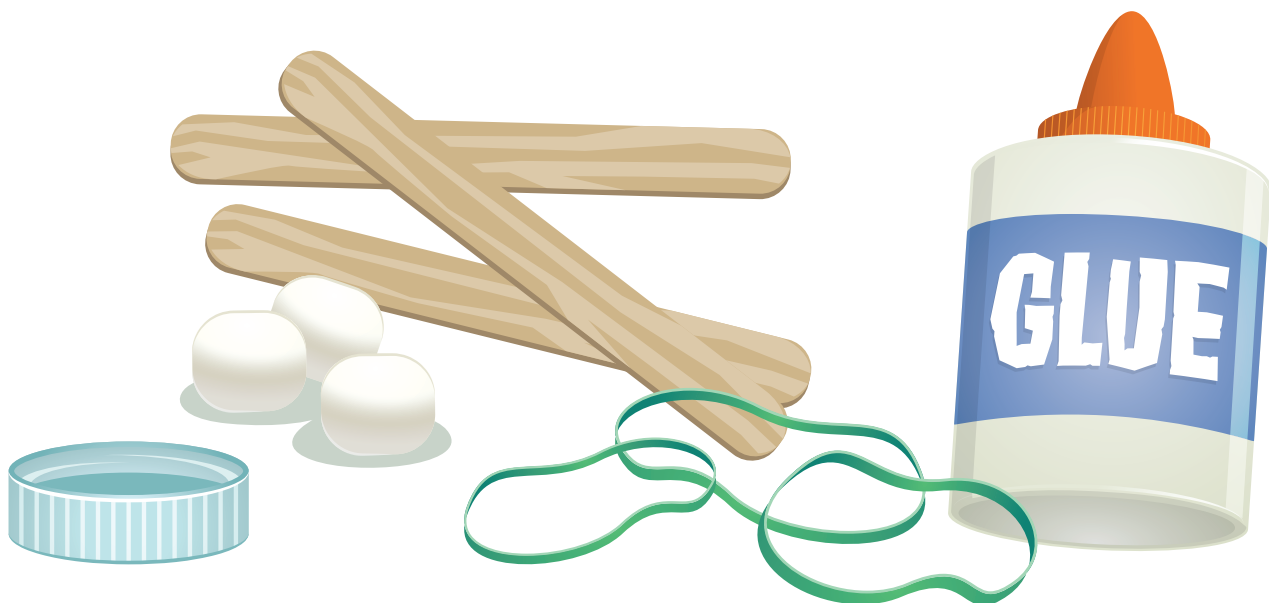

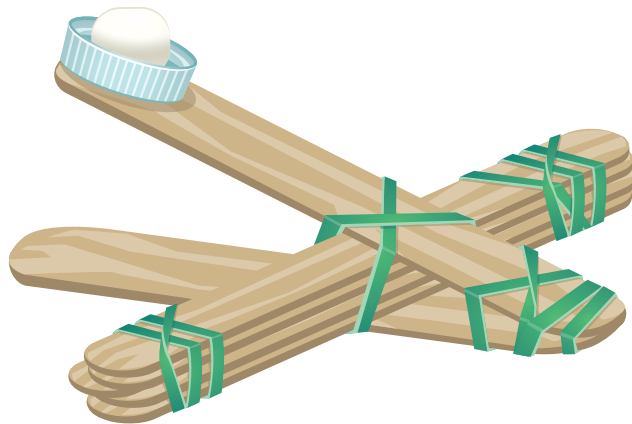

See how far you can make a marshmallow fly with this cool craft!

WHAT YOU'LL NEED:

- 10 craft sticks
- 4 rubber bands
- Glue
- Bottle cap
- Marshmallows

HOW TO DO IT:

1. Take two craft sticks and stack them on top of each other. Attach them on one end with a rubber band.
2. Stack the remaining eight craft sticks. Use two rubber bands to keep them together, one on each end.
3. Grab the first two craft sticks. Gently pull them apart, keeping the rubber band at the end, and insert the stack of 8 craft sticks. One of the sticks will create the base of the catapult and the other will be the moving part. Attach with the last rubber band, forming an X where the two craft sticks touch the larger stack.
4. Glue a bottle cap to the top craft stick, flat side down. This will give your marshmallows a place to sit without sliding off before you shoot them.
5. After the glue dries, try your catapult out! You can even make a target to see how accurate you are at marshmallow launching. Try out some different designs and see which ones work best!
